

Database Theory and Applications for Biomedical Research and Practice (BMIN 502/EPID 635)

Spring 2019

Assignment 11: Graph modeling

For this assignment, you are going to instantiate your ABIC model as a neo4j database. You will need to write the script to do this, inserting four or five patients. Submit the Cypher script as a Word or pdf document, including a screenshot of the graph from the neo4j Browser. You will find it most helpful to start with the Arrow Tool, generate the code there, and then run it in the Browser. Submit your assignment to Canvas, Assignment 11 by 9am, 4/23 as **yourlastname_BMIN502_2019_11**.
